International Prostate Symptom Score (I-PSS)

See separate related Benign Prostatic Hyperplasia and Lower Urinary Tract Symptoms in Men articles.

The International Prostate Symptom Score (I-PSS) is used in the assessment of lower urinary tract symptoms in men (LUTS)\(^1,2,3,4\).

The I-PSS is free for use by individual clinicians and for non-funded research. It is available on the web from Urology Specialists PC.

I-PSS© 1992 Michael J Barry, all rights reserved. I-PSS contact information and permission to use: Mapi Research Trust, Lyon, France. E-mail see: http://mapi-trust.org/contact-us/, internet: www.mapi-trust.org.

The I-PSS was originally based on the American Urological Association seven-item symptom score (AUA-7).\(^1\) The 'quality of life' question was added by the World Health Organization when it was adopted by the International Consensus Committee as an international questionnaire for evaluating prostatic symptoms. Although the single 'quality of life' question may not capture the full impact of prostate symptoms, it can be used as a starting point for a doctor-patient discussion on management.
