Loprazolam for sleeping problems

Loprazolam will help you to sleep. You will be prescribed a short course of treatment only.

Take the tablet just before you go to bed.
The effects of loprazolam can last into the following day; it is likely to impair your reactions and your ability to drive. Do not drive and do not use tools or machines while affected.

About loprazolam

Poor sleep (insomnia) is fairly common but does not usually last for long. If you have problems sleeping, it may mean that you have difficulty getting off to sleep, or you may wake up for long periods during the night, or you may wake up too early in the morning. ‘Sleeping tablets’ like loprazolam are considered a last resort, but are sometimes prescribed for a short period of time to help with a particularly bad spell of insomnia.

Loprazolam works by affecting the way certain brain chemicals (neurotransmitters) transmit messages. This has a calming effect which helps you to sleep. It works well in the short term, with one week’s treatment normally being sufficient, although up to three weeks of treatment are sometimes required. If you take it for longer, the medicine may lose its effect (you may become tolerant to the effect) and when you stop taking it you may develop withdrawal symptoms. You may need to keep taking the medicine to avoid the withdrawal symptoms. This is known as drug dependence.

In addition, you may become addicted to loprazolam. Addiction is different from dependence. You have an overwhelming craving for a drug, so that you feel compelled to take it even though it is harming you physically or affecting your life and relationships.

Before taking loprazolam

Some medicines are not suitable for people with certain conditions, and sometimes a medicine can only be used if extra care is taken. For these reasons, before you start taking loprazolam it is important that your doctor knows:

- If you are pregnant or breast-feeding.
- If you have any breathing problems.
- If you have any problems with the way your liver works, or if you have any problems with the way your kidneys work.
- If you have a mental health problem. This includes conditions such as psychosis, depression, and personality disorders.
- If you have ever had a drug or alcohol addiction.
- If you have a condition causing severe muscle weakness, called myasthenia gravis.
- If you have a rare inherited blood disorder called porphyria.
- If you have ever had an allergic reaction to a medicine.
- If you are taking any other medicines. This includes any medicines which are available to buy without a prescription, as well as herbal and complementary medicines.
How to take loprazolam

- Before you start the treatment, read the manufacturer’s printed information leaflet from inside the pack. It will give you more information about loprazolam, and it will also provide you with a full list of the side-effects which you could experience from taking it.
- The usual dose is one tablet (1 mg) taken just before going to bed. Your doctor may recommend that you take a dose for just a few days, or only on certain days of the week. It is important that you take loprazolam exactly as your doctor tells you to.

Getting the most from your treatment

- Try to keep any appointments with your doctor. This is so your doctor can check how you are feeling.
- The effects of loprazolam can last into the following day; please be aware that it is likely to impair your judgement and reactions, and so affect your ability to drive. It is an offence to drive while your reactions are impaired, so do not drive until you know how you react, especially when you first start treatment. Even if your driving ability is not impaired, should you drive, you are advised to carry with you some evidence that the medicine has been prescribed for you - a repeat prescription form or a patient information leaflet from the pack is generally considered suitable.
- Do not drink alcohol while you are on loprazolam. It will increase the risk of sedative side-effects.
- If you are due to have an operation or any dental treatment, please tell the person carrying out the treatment that you are taking a benzodiazepine. This is because loprazolam increases the effects of some anaesthetics.
- Your doctor may recommend that you reduce your dose gradually when it is time to stop taking it. This is to reduce the risk of you experiencing withdrawal effects. Follow carefully any instructions your doctor gives to you.

Can loprazolam cause problems?

Along with their useful effects, most medicines can cause unwanted side-effects although not everyone experiences them. The table below contains some of the more common ones associated with loprazolam. The best place to find a full list of the side-effects which can be associated with your medicine, is from the manufacturer’s printed information leaflet supplied with the medicine. Alternatively, you can find an example of a manufacturer’s information leaflet in the reference section below. Speak with your doctor or pharmacist if any of the following continue or become troublesome.

<table>
<thead>
<tr>
<th>Common loprazolam side-effects</th>
<th>What can I do if I experience this?</th>
</tr>
</thead>
<tbody>
<tr>
<td>Feeling sleepy or light-headed during the day</td>
<td>Do not drive and do not use tools or machines. Do not drink alcohol</td>
</tr>
<tr>
<td>Feeling unsteady, weak, forgetful, confused, or aggressive</td>
<td>If any become troublesome, speak with your doctor</td>
</tr>
<tr>
<td>Headache, feeling sick, blurred vision</td>
<td>These should soon pass, but if any are troublesome or you are concerned about them, please speak with your doctor</td>
</tr>
</tbody>
</table>

If you experience any other symptoms which you think may be due to the tablets, speak with your doctor or pharmacist for further advice.

How to store loprazolam

- Keep all medicines out of the sight and reach of children.
- Store in a cool, dry place, away from direct heat and light.
Important information about all medicines

If you buy any medicines, check with a pharmacist that they are safe to take with your other medicines.

Never take more than the prescribed dose. If you suspect that you or someone else might have taken an overdose of this medicine, go to the accident and emergency department of your local hospital. Take the container with you, even if it is empty.

If you are having an operation or dental treatment, tell the person carrying out the treatment which medicines you are taking.

This medicine is for you. Never give it to other people even if their condition appears to be the same as yours.

Do not keep out-of-date or unwanted medicines. Take them to your local pharmacy which will dispose of them for you.

If you have any questions about this medicine ask your pharmacist.
